

Range of Capacities
Available up to 64GB capacity

Casings
Standard, Slimline, Rugged, Retractable

Data Retention Time
10+ years

Read Transfer
7MB/second

Write Transfer
2.5 – 4MB/second

Power Consumption
<145mA

Erase Cycle
1,000,000 x

With increasing pressure on organisations to protect and control client data, greater measures are needed to tackle the areas of concern and lax security, one of which is portable data products.

Hypertec have responded to these concerns with the release of the DataSafe USB flash drives, offering government standard 256bit AES hardware encryption. DataSafes contain a private data section which is encrypted and accessible via a failsafe password, and a small read-only area which is seen upon startup and contains the Lock software.

The combination of encryption and password make this a very secure method of carrying data: even if the device were opened and the flash chips removed, the data held therein would still be inaccessible.

Features

- Supplied in retail packaging with USB extension cable, neck strap, and driver CD.
- Available with customer branding if required, please ask for further information
- Password protection and 256bit AES encryption functionality
- LED indicator - shows when the HyperDrive is in use
- Hot Plug & Play - enables you to install/uninstall the HyperDrive at any time.
- Cross platform compatibility – move data between different operating systems
- USB2.0 (USB 1.1 backwards compatible)
- Available in storage capacities of 512MB up to 32GB
- OS support for Windows 2000/XP/Vista
- 3 year warranty
- SafeErase function safely erases all data traces to protect from illegal future restoring.
